USE OF CHLORINE DISINFECTANTS
FOR BLOOD AND BLOOD-STAINED BODY FLUID SPILLS

BEFORE YOU START

Always wear protective gloves, aprons and facial protection

Wherever possible ensure good ventilation when using all chlorine products

Always make up a fresh solution for each use.

Refer to safety notes on product label.

Check product expiry date.

Discard all in a clinical waste bag and then clean the area with neutral detergent.

For Spills on Relatively Flat Surfaces

Sprinkle Haz-Tab granules over spill until all moisture is absorbed.

Leave for no more than 2 minutes.

Collect granules & spill mixture using paper towels.

For Splashes or Drips on Vertical Surfaces

1. Make a 10,000ppm chlorine solution.
2. Add four tablets to the small 1 litre diluter and fill to the line with cold tap water.
3. When the tablets have dissolved screw down the diluter cap and mix gently by inversion.
   DO NOT SHAKE THE CONTAINER.
4. Use with disposable paper towels to wipe area and remove drips or splashes on vertical surfaces.

NOTE: Refer to the management of blood and body fluid spillages policy for further details.

FINALLY
Discard all remaining solutions by flushing down the sink or sluice with plenty of cold water.
Keep the diluter for next use.

NOW WASH YOUR HANDS!

Note:

• Never use on chemical spills or mix with any other cleaning products.
• Chlorine products may bleach soft furnishings and fabrics.
• Never use the solution in a spray bottle, or dilute with hot water.
• If you are in doubt about the use of these products, consult a member of the Infection Prevention & Control Team.
